PRESS RELEASE

NO. 129/2021

Dortmund's acoustex 2021 trade show cancelled

acoustex will not be held as planned this year on 24 and 25 November 2021. Despite the right signals, the timing of a restart and long planning lead-times mean it is still a little too early for the industry.

Dortmund, 17 September 2021 – The third acoustex trade show for acoustic solutions will unfortunately not be opening its doors at Dortmund's exhibition centre as planned on 24 and 25 November 2021. Even with recent developments and signals from political decision-makers in favour of holding events, the long-term planning behind a show of this nature is still very challenging for everyone involved at this time.

The subject areas addressed by acoustex will continue to be a firm feature of activities at Messe Dortmund, and will accordingly continue to be refined and developed.

Further information and all developments concerning the show can be found on the show's website (www.acoustex.de). The acoustex channels on Facebook, LinkedIn, Instagram and Xing also provide regular updates.

TRADE SHOW AT A GLANCE

ACOUSTEX – THE ACOUSTIC SOLUTIONS SHOW

The two-day acoustex trade show sees itself as the leading communication and trading platform. As an acoustic solutions show for Silent Living & Working and Silent City, it offers a broad overview of the market and of products featuring established and leading-edge technologies, materials and items for reducing sound emissions. At the same time, the themed areas Silent Living & Working and Silent City offer a superb framework for demonstrating design solutions for controlling sound emissions in widely varying day-to-day life applications. The show is accompanied by a practice-led conference and supporting programme with leading research and industry specialists reporting on the latest trends, innovative solutions and current challenges in the broad and complex field of noise control and sound design.

EVENT ORGANISER:

Messe Dortmund GmbH

TARGET VISITOR GROUPS:

Silent Living & Working: Property owners, architects, specialist planners and engineers, building contractors, property fitters and furnishers, interior designers, exhibition

stand and shop fitters, facility managers, R&D engineers and technicians, and purchasers of acoustically effective solutions, product developers and designers of products giving off vibration and noise, test rig operators, those investing in production sites and facilities, production plant and machine planners, and process managers.

Silent City: Development engineers and technicians, federal, state and municipal authorities investing in roads, tunnels, rail and noise barriers, physicists, construction engineers, specialist, urban traffic route planners with a focus on noise control, representatives of road and rail construction companies and civic action groups, NGOs and medical practitioners concerned with the health aspects of noise and sound control.
